North Cedar Improvement District

ADMINISTRATION REPORT

Prepared by: Heather Sarchuk

Date: August 15, 2016

Re: Trustee's - Prioritize Tasks ie: treatment, production, storage, distribution, etc.

This item was on the July 14, 2016 Incamera Board Agenda as requested by the Board Chair, Keith Wilson. For some reason it was missed and no discussion took place. At the August 11, 2016 Incamera Board meeting the Trustees had the following discussion:

- Want more information on the treatment plant costs and what district engineers included in the cost.
- Suggested contacting Island Health to ask if the District has a deep well would it need to be treated, possibly could contact the airport to ask if they are required to treat their water and to verify what aquifer they are drawing their water from.
- Investigate to see if the District can tap into Aquifer 160 – the lower Cassidy Aquifer, if it is within District boundaries.
- Watermain installations costs are approximately \$425 per meter.
- Water Supply is a priority.

At the August 11, 2016 Incamera Board meeting the Board motioned for this item to go to the Committee of the Whole meeting scheduled on August 25, 2016 for further Discussion.
